

## Biomedical Biological Sciences Research Building

project description | survey

**location**

Lexington, Kentucky

**client**

E.C. Matthews  
University of Kentucky

**completion date**

2005

**fee**

\$15,900

CDP Engineers (CDP) was sub-contracted by E. C. Matthews Construction Company to perform survey related work on this project beginning in 2004 and continuing into 2005. We were initially responsible for extending the existing on-site control network and providing an “as-built” survey of the completed project. Subsequent to our initial control survey, we were asked to provide construction layout of the driveways, curbing and sidewalks. This effort continued until completion of the project. The “as-built” survey included all existing features and improvements in the project limits such as building footprints, sidewalks, driveways, utilities, ponds, parking areas and landscaped areas. This survey covered approximately 11.7 acres mostly within the bounds of Virginia Avenue, Limestone, Leader Avenue and Press Avenue.
