

CARDINAL HILL HOSPITAL EXPANSION

Location:

Lexington, KY

Client:

Cardinal Hill Hospital

Completion Date:

1996

Preparation of final development plan and construction drawings for a new Pediatric Center at Cardinal Hill Hospital. CDP Engineers prepared site layout drawings, grading and erosion control plans, storm water detention designs, storm sewer designs, and other related site/civil work.

This project was complicated by designing new building, parking, and roadway improvements on the site of an existing development. Existing pavement areas, curb and gutter, storm drainage facilities, and other infrastructure were salvaged as much as practical.
